

Technical Support Engineer II

Definition:

Under direction plans, organizes and directs IT support to customers by resolving technical issues and providing support for complex computer systems, server-based applications, and network-related IT problems.

Distinguishing Characteristics

The Technical Support Engineer II is the lead position of the technical support classification series. The incumbent's role is to plan and provide advanced and innovative technical assistance to internal and external customers. This classification is characterized by its primary responsibility to analyze and affect appropriate solutions for technical issues within different components; such as software, hardware, server-based applications, and networking issues. They must have excellent analytical, problem-solving and interpersonal skills to communicate on complex technical-related problems quickly and efficiently. It is distinguished from the Technical Support Engineer I in the ability to lead in the planning, implementation, and support of complex server and application solutions; including maintenance, troubleshooting and repair. It is further distinguished from the Systems Administrator by the latter's responsibility to maintain and support enterprise-level Directory Services and server-based applications.

Essential Functions:

- Install and configure complex server-based applications.
- Assist in monitoring and maintaining computer networks.
- Install and configure desktop & server operating systems.
- Development, administration and maintenance of Directory Services.
- Resolve basic issues related to the network.
- Resolve hardware malfunctions and effects repairs.
- Prioritize and manage the workflow.
- Diagnose, troubleshoot, and resolve IT issues by questioning customers about the issues they are facing in a detailed fashion so that they understand the root cause of issues.
- Design IT systems to meet the particular requirements of their organization or clients.
- Possess the ability to learn and work on changing and emerging technologies.
- Track users' system issues until resolved while adhering to the agreed timelines.
- Resolve complex problems, by interacting with customers through phone, emails, chats or other electronic means, and provide unambiguously written instructions or technical manuals.
- Properly escalate unresolved issues to appropriate internal teams
- Maintain procedural documents and reports.
- Follow standard procedures of the organizations to resolve issues by escalating problems to the relevant internal departments.
- Provide accurate feedback to customers promptly.
- Ensure proper logging of all issues.
- Follow up with customers to make sure their computer systems are functioning properly after troubleshooting.
- Prepare accurate reports promptly.

- Document technical knowledge in the knowledge database.
- Provide training on the use different types of systems.
- Monitor daily performance of technical systems for both users and technical staff.
- Deploy new software or hardware systems.
- Monitors existing systems to assure appropriateness, effectiveness, accuracy and timeliness of information received.
- Researches, analyzes, evaluates and makes recommendations on data processing program procedures and systems.
- Evaluates equipment and software capability; researches and resolves problem areas and discrepancies in computer applications.
- May represent the department at information technology meetings.
- Analyzes state and federal regulations to determine needed changes to automated systems and procedures.
- May be required to maintain, troubleshoot and perform repairs on telephones and related equipment.
- Perform related duties consistent with the scope and intent of the position.

Employment Standards:

Graduation from an accredited college or university with a bachelor's degree, including 15 semester (25 quarter) units in computer science or management information systems AND two (2) years of paid experience, one (1) of which must have been paid experience in a complex IT environment utilizing principles and techniques which include system support, troubleshooting and resolution of network problems, managing or coordinating the data processing operations for a department or organization.

OR

Completion of (60) semester (90) quarter units from an accredited college or university with course work in computer science or management information systems AND four (4) years of paid experience, two (2) of which must have been in a complex IT environment utilizing principles and techniques which include system support, troubleshooting and resolution of network problems, managing or coordinating the data processing operations for a department or organization.

OR

Completion of an accredited trade or vocational school training program in computer repair, computer science or information systems AND four (4) years of paid experience, two (2) of which must have been in a complex IT environment utilizing principles and techniques which include system support, troubleshooting and resolution of network problems, managing or coordinating the data processing operations for a department or organization.

OR

Two (2) years of experience as a Technical Support Engineer I in the Kern County classification systems.

OR

Six (6) years of experience, four (4) of which must have been in a complex IT environment utilizing principles and techniques which include system support, troubleshooting and resolution of network problems, managing or coordinating the data processing operations for a department or organization.
