Potential 2027 Project Delays

G. HILL
COUNTY OF KERN
1115 TRUXTUN AVE. 5TH FLOOR
BAKERSFIELD, CA 93301

Dear Customer,

We are contacting you because your project(s) involving PG&E facilities may be delayed in 2027. We recognize that a delay may impact critical public infrastructure projects, jeopardize public funding, or disrupt your project schedule. We are sharing this information now to give you as much time as possible to plan and to explain why these delays may occur.

California's wildfire liability laws create financial uncertainty for the banks and investors who fund energy infrastructure like PG&E's, which in turn increases borrowing costs for customers and limits the funding available to meet California's growing energy needs. In response, PG&E has begun a strategic review and revised its 2027 capital plan.

PG&E plans to defer $2 billion of work previously scheduled for 2027, reducing planned investment to approximately $11 billion. This difficult decision will reduce borrowing at today's elevated interest rates that would otherwise appear on every customer's bill. Deferring this work now helps keep overall PG&E rates as low as possible for all customers, while continuing to fund critical safety programs and meet our compliance obligations.

Based on current assessment, affected relocation and modification projects planned for 2027 could be delayed months or even beyond 2027, depending on available funding and project prioritization. We will work to minimize these delays wherever possible.

We will continue actively pursuing solutions that reduce the scope of project impacts while protecting customers from unnecessary long-term rate increases.

We know this uncertainty is difficult, and we are sorry for the disruption it may cause. We are sharing this information now so you can prepare, and we will have more information in mid-December. If you have questions, please call **1-888-576-6250**. Representatives are available **Monday through Friday from 7 a.m. to 6 p.m.**

We are committed to working with you to understand critical deadlines, dependencies and potential options to help meet your community's needs despite this slowdown.

We remain committed to supporting local community development projects, including transportation, public safety and public works. The challenge – and our responsibility – is sustaining that work while keeping customer costs as low as possible.

Sincerely,

Patti Poppe
Chief Executive Officer
PG&E Corporation
